File Operations in C

- Write a C program to perform the following file operations:
- Open an existing file named "data.txt." If it doesn't exist, the program should create it.
- Write the string "Hello, File Handling in C!" to the file.
- Move the file pointer to the beginning of the file and read the contents back.
- Print the contents read from the file to the console.
- Close the file.

Code -

```
#include <stdio.h>
#include <stdlib.h>

int main() {
    FILE *fptr;
    char buffer[100];

    // "w+" allows reading and writing. It creates the file if it's missing.
    fptr = fopen("data.txt", "w+");

    if (fptr == NULL) {
        printf("Error opening/creating file!\n");
        return 1;
    }

    // writing the string to the file
```

```
fprintf(fptr, "Hello, File Handling in C!");  
printf("Successfully written to the file.\n");
```

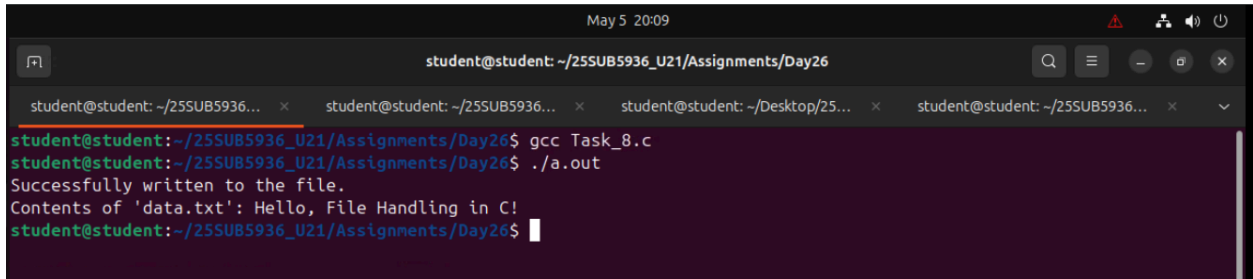

```
// 3. Moving the file pointer to the beginning  
// rewind(fptr) is equivalent to fseek(fptr, 0, SEEK_SET)  
rewind(fptr);
```

```
// 4. Read the contents back  
// fgets reads up to the newline or 99 characters  
if (fgets(buffer, 100, fptr) != NULL) {  
    // 5. Print the contents to the console  
    printf("Contents of 'data.txt': %s\n", buffer);  
}
```

```
// 6. Close the file  
fclose(fptr);
```

```
return 0;  
}
```

Output

```
May 5 20:09  
student@student: ~/25SUB5936_U21/Assignments/Day26  
student@student: ~/25SUB5936_U21/Assignments/Day26$ gcc Task_8.c  
student@student: ~/25SUB5936_U21/Assignments/Day26$ ./a.out  
Successfully written to the file.  
Contents of 'data.txt': Hello, File Handling in C!  
student@student: ~/25SUB5936_U21/Assignments/Day26$
```
